Enabling the Energy Union

What is ENABLE.EU?

Social Acceptability of the energy transition until 2050 – ENABLE.EU for energy
Union

Bratislava, 19 November 2018

Stefano Proietti, ISINNOVA

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement number 727524.

Fact sheet

- **ENABLE.EU:** Enabling the Energy Union through understanding the drivers of individual and collective energy choices in Europe
- **Duration:** November 1, 2016 to October 31, 2019 (36 months)
- **Budget:** € 3,337,416.25 (EU funding)
- **Consortium:** 12 partners in 11 countries
- **Website:** <http://www.enable-eu.com>

The project in brief

- The Energy Union Framework Strategy aims at fostering a **cost-efficient energy transition** able to deliver **secure, sustainable and affordable energy** to all European consumers.
- It is aimed at a **citizen-oriented energy transition** based on a **low-carbon transformation** of the energy system.
- The successful implementation of the Energy Union will materialize in a **change in energy production and energy consumption choices**.
- These choices are shaped by **economic prerequisites, value systems, gender-based preferences, efficiency of governance and the maturity of civil society**.

***Changing energy behaviour by
empowering consumers***

Aims of the project

Understanding the drivers of energy choices in three areas: transport, heating and cooling, and electricity

- To identify the key factors of energy choices in three areas: **transport, heating and cooling, and electricity**.
- To better grasp the **interactions** between individual and collective energy choices and the regulatory, technological and investment prerequisites of the Energy Union transition pillar.
- To look at the **social acceptability** of energy transitions using a **participatory foresight and assessment process** engaging key stakeholders and selected households.
- To increase the knowledge of **governance and social mobilisation practices** that encourage collective energy choices in line with the Energy Union objectives
- To provide **strategic policy recommendations**

Concept and approach

- To decipher the **key socio-economic drivers** of individual and collective energy choices by analysing the interrelation between various factors, such as **social norms, belief systems, everyday practices** and **economic aspects**.
- Cross-country comparison in **11 countries**, to understand the factors that drive or impede **everyday routines and practices**.
- To increase social acceptance by making citizens **active participants** in consumption and production of energy.

Methodology

**Recommendations and scenarios
designed to achieve the Energy
Union's long-term targets**

- Literature review of existing theories and studies
- Investigation of technological, economic and social factors affecting individual energy choices and behaviours, as well as social mobilisation and governance factors that influence the social acceptability of energy transition.
- Participatory foresight exercises, focusing on how to change energy choices and behaviours to support the full-scale transition to a low carbon economy.
- Reference and policy scenarios on transition that will be assessed using quantitative modelling and the results will be compared with the current long-term energy targets of the European Commission.
- Series of policy recommendations formulated and disseminated to policy makers.
